* modify the RAM and storage for the created virtual machine.

AIM:- To create RAM and storage for virtual machine

Procedure:-

→ make sure your virtual machine is shutdown and not running.

→ open Vm virtual BOX and select the virtual machine you want to modify from the list of virtual machine.

→ under the "Mother board" tab, you can modify the amount of RAM to 10 GB. that is allocated to your virtual machine by sliding the "Base memory" slider or entering the value 25GB.

→ To modify the virtual hard disk, click on the "selrage" tab on the left-hand side of the "settings" windows.

→ select the virtual hard disk you want to Modify from the list of storage devices, and click on the "Attributes" button.

→ In the "Attributes" window, you can modify the side of the virtual hard disk

→ If we need to revert the snapshot, simply it from the "snapshot manager" window and clcud.

→ After making your desired changes.

That it your changes to the RAM and storage for your virtual machine. should now be reflected the next time you start the virtual machine.

Output:-

vara;

v Devices

Memory : 9.2 GB

Processors : 2

Hard DISK (SCSI): 4 GB

Network Adaptor : NA T

sound card : Auto detect.

Display : Auto detect

CD/DVO:

USB controller:

sound card:

Printer:

Display:

v Virtual machine Details

states: Powered off

configuration file

Hard ware compatition.

Primary IP address

Result:-

Using VM Vare workstation pro, we sucessfully modified the RAM and storage of created virtual machine.
